CHICAGO, ILLINOIS, U.S.A.

WIRE WOUND CANDOHM FIXED RESISTORS

Standard Equipment in the Leading Sets

Candohms are guaranteed to lower your costs.

Candohms offer a production and initial cost saving.

Candohms permanent mounting eliminates vibration problems.

Candohms greatly assist sectional production testing.

Candohms are ideal for the following important uses:

Voltage Dividers

Insulated Terminals

Cathode Biases

Floating Grounds

Pilot Light Reducers

Accuracy and Tolerance

SPECIAL NOTES

Terminals—Are coke tin for quick soldering.

Factor of Safety—All units, except type FH, dissipate their rated amount at approximately 120° F. and will stand a constant duty overload of 50% without exceeding 200° F. Location of unit in chassis causes this to vary somewhat.

Maximum Radiation—Is secured when unit is riveted to chassis.

Type FH—is wound on a special asbestos core which accounts for the wider tolerance. Normal FH temperature at 5 watts per inch is 220° F.

Mounting Centers—Are .562 inch longer than actual winding.

Minimum Distance—Between terminals should be not less than .250 inch to assist production soldering and tolerance.

NOMENCLATURE

Letters following the type of unit designate the following:

C=center tap
O=one end mounting
B=special blue case
N=no mounting lugs

E=end terminals
S=special mounting or lugs
OP=one end perpendicular mounting
VC=variable center tap
VCB=variable center tap with bias resistor....

SAMPLES WITH SPEED

A special department is maintained to forward samples immediately. It is a pleasure to serve you.
